

# Guide to Completion of the Anatomy Licence Application

The following activities can only take place under the authority of a licence from the Human Tissue Authority:

- The storage of an anatomical specimen;
- The carrying out of an anatomical examination;
- The storage of the body of a deceased person, or relevant material<sup>1</sup> which has come from a human body, for use for a Scheduled Purpose<sup>2</sup>; and
- The removal from the body of a deceased person (otherwise than in the course of an anatomical examination or a post-mortem examination) of relevant material of which the body consists or which it contains, for use for a Scheduled Purpose.

This document outlines the legal framework of the licensing system, explains the application process and provides guidance on how to complete the application form.

Our [Code of Practice C](#) and the [Anatomical examination licensing standards and guidance](#) provide additional guidance on the licensing requirements for the Anatomy sector.

## General

1. The Human Tissue Authority (HTA) was established under the Human Tissue Act 2004 (HT Act). The HTA licenses a number of activities and undertakes inspections of establishments carrying out these activities to ensure the requirements of the HT Act are being met.
2. We operate a continuous licensing system, with an annual [licensing fee](#), although in some circumstances we can issue fixed-term licences.
3. The HTA must receive an application before it can grant a licence. The application must specify the premises at which the licensable activities will take place. Where the establishment has multiple sites, such as a main site with remote satellite sites where bodies, body parts or tissue samples are stored, we can accept a single application, provided:
  - the same Designated Individual (DI) is appointed for all sites; and

---

<sup>1</sup> Go to <https://www.hta.gov.uk/policies/relevant-material-under-human-tissue-act-2004> for more information on relevant material

<sup>2</sup> See Schedule 1 of the HT Act (Scheduled Purposes) Part 1 and Part 2

- all sites work to the same procedures and governance arrangements.
4. We issue separate licences for the hub and for each satellite site, under the same licensing number. Satellite sites are eligible for a reduced licence fee.

### **Completing and submitting a licence application**

5. Licence applications can be downloaded from the [HTA website](#) and should be submitted by email to [licensing@hta.gov.uk](mailto:licensing@hta.gov.uk)
6. The application form has four sections:
  - Information about the establishment
  - Information about the DI and the Licence Holder
  - Information about how the [HTA licensing standards](#) are met
  - List of documents to be submitted as part of the application
7. The licensing standards section contains four sets of standards that applicants must assess and evaluate their performance against. These are:
  - Consent
  - Governance and Quality Systems
  - Traceability
  - Premises, Facilities and Equipment
8. The HTA will assess the information provided in the application form and the mandatory documents that must be submitted before the application can be assessed, taking this as evidence on which to base an informed and proportionate licensing decision.
9. Where we have considered it to be helpful, we have included guidance under individual standards to help you assess whether you meet them. You should include details of what procedures you have in place to meet each standard, or if the standard is not being fully met, what you are doing in order to achieve the standard. Key strengths or areas identified for improvement can also be given. For each applicable standard, the establishment should consider the evidence it has to demonstrate whether the standard is not met or met.
10. Where a standard is not applicable please select 'N/A' and provide an explanation of why the standard is not applicable to your establishment.
11. We may contact applicants and undertake a site visit to obtain any additional information or evidence required. This could be at any stage in the application process.
12. Any incorrect or misleading information provided in an application could lead to the revocation of any licence granted.

13. Applicants will need to complete their application and submit all relevant information before the application can be assessed. If an application is not completed due to delays at the establishment within three months from the start of assessment, the applicant(s) will need to repay the licence application fee before their application is further assessed.
14. If an application is rejected following assessment, the applicant(s) will need to repay the licence application fee if they wish to submit a new application.

### **Granting a licence**

15. A licence will be granted when we receive written acknowledgement of the licence offer from the proposed DI and the Licence Holder.
16. If a licence application is refused or granted with conditions and the applicant chooses to challenge this decision, the proposed Licence Holder and/or the proposed DI must give notice of their intention to make representations within 28 days from the date that notice of the proposed licensing decision was given by the HTA (i.e. the date on the Licence Offer/Notice of Proposal letter). This is a strict time limit laid down by statute.
17. Notification of the intention to make representations may be given to the HTA either orally or in writing by the person entitled to make representations. If the request is given orally, it must be made to the Authority's Director of Regulation, one of the Regulation Managers or one of the Heads of Regulation only. The person receiving the oral request to make representations will record the request and confirm this in writing to the person proposing to make representations.
18. The person entitled to make representations must after any oral request then confirm their intention to make representations in writing to the HTA. This may be by letter or email to the Director of Regulation.
19. The following section gives specific help on completing the Application Form. Please contact us by emailing [licensing@hta.gov.uk](mailto:licensing@hta.gov.uk) if you need further information about any part of the application form or our process for considering licence applications.

## **How to complete the application form**

### **Establishment Information**

20. Establishment name

Please provide the name of the organisation on whose premises the activities will take place. Careful consideration should be given to where the licensed activities are going to take place and whether they extend to more than one area within the premises. Include the department name if applicable.

21. Establishment address

A licence application must specify the premises where the activities are to take place. The address of the main site should be stated in this section. Where the licensed activity will take place at more than one premises, such as a main site with satellite sites, a separate satellite licence would be needed for each site; however, a single application for multiple licences may be made. Details of satellite sites should be recorded in the relevant section.

22. Names of person(s) who have consented to be designated on the licence (where the establishment is applying for a licence(s) on single premises)

The HT Act allows the DI to designate persons on the licence, with their agreement. Persons Designated can support a DI in overseeing licensable activities.

**Satellite Sites**

23. Address of satellite site premises and activities to be licensed

Satellite sites are premises under the same governance arrangements as the main site (hub) and are supervised by the same DI. Each satellite site will have its own licence.

24. Names of person(s) who have consented to be designated on the licence at the satellite premises.

There should be a primary Person Designated at each satellite site who can direct licensable activities at the site and is accountable to the DI. Please provide the name of the primary Person(s) Designated on the licence for the satellite premises and any additional persons to be designated on the licence of the satellite premises.

**Application to be Designated Individual (DI)**

25. Information about the role of the DI is available on our [website](#).

26. With regard to the organisational structure of the establishment, please indicate the lines of responsibility between the DI and any persons engaged in licensed activities.

We must be satisfied the DI is able and willing to supervise the licensed activities. The relationship between the DI and those working under the licence should be described here, as well as the DI's position in the overall governance structure.

27. Please explain how the DI ensures that staff, who will be working under the licence, are appropriately qualified and trained in techniques relevant to their work and continuously update their skills.

The DI must ensure that suitable practices are carried out by those undertaking the licensed activities; staff training is an important part of this. The DI's role in ensuring that staff working under a licence are suitably qualified and trained should be described here.

28. Declaration

The DI must read and acknowledge each statement in this section.

### **Application to be Licence Holder/Corporate Licence Holder**

29. The applicant can be a person or a corporate body and must be suitable to hold the position of Licence Holder. If the applicant is a corporate body, the application to be a Corporate Licence Holder must be completed by a person suitable to act as Licence Holder contact. The HTA would encourage that this is a different person to the one carrying out the role of the DI.

30. Declaration

The Licence Holder or Corporate Licence Holder contact must read and acknowledge each statement in this section.

### **Licensing Standards**

31. The licensing standards are separated into four main themes: consent; governance and quality systems; traceability and premises, facilities and equipment. Each of these four sections must be completed.

32. It is important for establishments to demonstrate how they meet HTA quality standards.

### **List of mandatory documents to be submitted as part of the application form**

33. You will need to submit all documents in the following checklist, together with the completed application form, before your application can be assessed.

34. Please note that these do not need to be separate documents, they may be embedded within other governance documents (e.g. the Quality Manual). If that is the case, please provide the relevant document and indicate the page numbers or section where the mandatory document can be found in the relevant 'Further information on documentation' section of the application form.

## **Application Checklist – Mandatory documents**

### **Consent**

Body donation consent form

Bequest booklet

### **Governance and Quality Systems**

Organisational chart

Quality manual

Local code of conduct

List of SOPs of licensable activities (please note that these must be developed in line with guidance provided for standard GQ1)

Details of induction programme for new staff/training plan

List of organisations with TPA/SLA agreements in place for the provision of relevant material

Adverse incidents policy/SOP

Risk assessments relevant to licensable activities (please note that these must be developed in line with the guidance provided in relation to standard GQ6)

### **Traceability**

All documents that support end-to-end traceability of human material, including disposal

### **Premises, Facilities and Equipment**

Risk assessment of premises

Site plan, indicating where storage of relevant material will take place

Information on storage facilities that are/will be available (e.g. number of freezers, fridges, room temperature storage)

Contingency plan for failure in storage area

SOPs for monitoring and testing of storage conditions

## **HTA Licensing Standards**

## Consent standards

### **C1 Consent is obtained in accordance with the requirements of the Human Tissue Act 2004 (HT Act) and as set out in the HTA's Codes of Practice**

- a) Consent procedures are documented and these, along with any associated documents, comply with the HT Act and the HTA's Codes of Practice.
- b) Consent forms are available to those using or releasing relevant material for a scheduled purpose.
- c) Where applicable, there are agreements with other parties to ensure that consent is obtained in accordance with the requirements of the HT Act and the HTA's Codes of Practice.
- d) Written information is provided to those from whom consent is sought, which reflects the requirements of the HT Act and the HTA's Codes of Practice.

#### Guidance

It is important that information used to support the seeking of consent covers what is needed for potential donors to make informed decisions. This means all anticipated uses for donated material is covered, such as surgical training and the making of images.

Although taking photographs of human material is not covered by the HT Act, if an establishment intends to allow photographs to be taken of specimens to facilitate training, it is good practice for this to be included in the consent information. A number of establishments include this in their bequeathal, process and strictly control any photography in accordance with the consent obtained.

- e) Language translations are available when appropriate.
- f) Information is available in formats appropriate to the situation.

#### Guidance

Establishments should ensure that the consent process provides full information to donors in a variety of suitable formats. For example, the fonts used in bequeathal booklets and consent forms should be clear and of an appropriate size to be easily read.

#### General guidance

We have published model consent forms for body donation for anatomical examination, which can be found on our website. A number of establishments use these model consent forms as the basis for their own consent forms.

## **C2 Staff involved in seeking consent receive training and support in the essential requirements of taking consent**

- a) There is suitable training and support of staff involved in seeking consent.
- b) Records demonstrate up-to-date staff training.
- c) Competency is assessed and maintained.

### General guidance

It is important that consent training is not considered a one-off event and that proficiency in seeking consent is upheld.

There is no set requirement for the frequency of consent training. Consentseekers are expected to maintain awareness of current standards through reference to published guidance and relevant policies. Training may need to be updated when new policies or practices have been implemented.

## **Governance and quality system standards**

### **GQ1 All aspects of the establishments work are governed by documented policies and procedures as part of the overall governance process**

- a) Ratified, documented and up-to-date policies and procedures are in place, covering all licensable activities.

### Guidance

At a minimum, it is expected that most establishments will have standard operating procedures (SOPs) covering the following activities:

- consent;
- receipt;
- labelling;
- specimen preparation / preservation;
- storage;
- relevant transport arrangements;

- cleaning and decontamination;
- disposal.

An SOP should be a clear and accurate representation of an existing procedure or process, preferably set out in the format of a stepwise guide. SOPs should be understandable to enable new staff to follow a procedure from beginning to end. They should be detailed enough to ensure uniformity between staff in the performance of a specific function and should be followed to the letter by all staff who have been appropriately trained.

People undertaking the processes should be involved in developing the SOPs to ensure that the written procedures reflect actual practices; however, the author of an SOP should not also be the only person who reviews it. Regular review of SOPs will help to prevent incremental departure from written processes with passing time and allow establishments to identify improvements. Establishments should introduce a system to record that staff have read and understood SOPs.

b) There is a document control system.

Guidance

Governance documents should include:

- revision history and version number;
- effective from' date;
- review date (at least every three years);
- pagination;
- author and reviewer names.

c) There are change control mechanisms for the implementation of new operational procedures.

Guidance

Change control mechanisms should take into account the risks of any planned changes, any validation required, any training required and how implemented changes will be reviewed.

d) Matters relating to HTA-licensable activities are discussed at regular governance meetings, involving establishment staff.

Guidance

All staff working under the HTA licence should be aware of the governance arrangements in place, and they should be represented at governance meetings.

Overall governance processes should be supported by regular meetings with staff at the establishment who are engaged in licensed activities. Formal meetings should be minuted and the actions should be noted and followed up.

Documented minutes of meetings should be distributed to all relevant staff to help to ensure that they are aware of all important information relating to licensed activities at the establishment. National and local information relevant to activities should also be disseminated.

e) There is a system for managing complaints.

General guidance

A formal quality management framework helps to establish minimum expectations for governance and quality systems, and facilitates continuous improvement.

The work of the staff at the establishment must be subject to a system of governance. This means that there should be clear reporting lines and accountability (particularly with regard to individual staff and the Designated Individual), documented roles and responsibilities.

Establishments are encouraged to have an over-arching quality document which provides an overview of the establishment's main purpose, organisation and structure and approach to governance and quality. This document should be accessible to all staff involved in licensed activities.

## **GQ2 There is a documented system of audit**

a) There is a documented schedule of audits covering licensable activities.

b) Audit findings include who is responsible for follow-up actions and the timeframes for completing these.

General guidance

Audits will demonstrate compliance with HTA standards and demonstrate whether establishments are meeting the requirements of their own systems. A documented schedule of audits should be in place at each establishment. Vertical audits of records and specimens will allow the establishment to assure itself that specimens and records are fully traceable from consent to disposal. Records, including records of consent, should be audited regularly to ensure completeness, accuracy and legibility.

Audits should ideally include horizontal audits by staff involved in the processes, to ensure that SOPs accurately reflect actual practices and to identify areas for improvement. All audit findings and related corrective and preventative actions should be recorded to allow the

establishment to demonstrate compliance with HTA Standards and follow-up outstanding actions.

Audit processes can benefit from being undertaken by a person who is not normally involved in the activity at the establishment: a 'fresh eyes' view. Internal auditors should not be involved in auditing their own work. Some establishments may be able to make use of existing in-house expertise or services.

### **GQ3 Staff are appropriately qualified and trained in techniques relevant to their work and are continuously updating their skills**

- a) Qualifications of staff and all training are recorded, records showing attendance at training.
- b) There are documented induction training programmes for new staff.
- c) Training provisions include those for visiting staff.
- d) Staff have appraisals and personal development plans.

#### General guidance

Training and induction packages help to ensure that staff are fully trained on all policies and procedures relevant to their work. Establishments should ensure that training and development plans are in place and that these are reviewed periodically.

Staff should be encouraged to attend professional meetings and training events to ensure that they keep abreast of good practices in their areas of expertise.

### **GQ4 There is a systematic and planned approach to the management of records**

- a) There are suitable systems for the creation, review, amendment, retention and destruction of records.

#### Guidance

Documented records are used by establishments to evidence traceability and ensure a robust audit trail. In this context, traceability refers to the completeness of auditable information about every step in the pathway for the use of relevant material, from consent through to disposal, or the material has been used up entirely.

Documented procedures for the creation, review, amendment, retention and destruction of records are required to help to ensure that records are maintained appropriately. SOPs should

detail the frequency of document review required to ensure that documents are regularly reviewed and updated as necessary.

b) There are provisions for back-up / recovery in the event of loss of records.

#### Guidance

Records may be in various formats, including paper based, electronic, or stored on recordable media.

A centralised system for the storage of records can help to ensure that records are regularly backed-up.

c) Systems ensure data protection, confidentiality and public disclosure (whistleblowing).

#### Guidance

Consideration must be given to other relevant legislation, including compliance with the Data Protection Act 1998 where tissue has been taken from the living, and compliance with professional guidelines where applicable.

### **GQ5 There are systems to ensure that all adverse events are investigated promptly**

a) Staff are instructed in how to use incident reporting systems.

b) Effective corrective and preventive actions are taken where necessary and improvements in practice are made.

#### General guidance

All establishments licensed by the HTA are required to have an internal system for reporting adverse events and, where necessary, instigating an investigation or root cause analysis.

Clearly assigning responsibilities for incident management is important. As the DI is responsible for licensed activities at the establishment, there should be a process in place to allow them to be made aware of adverse events so that proper investigation and reporting can take place. There should be an adverse incident SOP detailing how adverse incidents are logged, reported, addressed and monitored.

Although there is currently no requirement for establishments in the anatomy sector to report adverse incidents to the HTA, if a DI has concerns about an adverse event, they are encouraged to contact us for further advice.

Examples of adverse events include:

- loss of dignity of the deceased (security breaches, interference with a body,
- unconsented photography of a body, damage to a body through a lapse in care;

- incorrect disposal;
- body parts/cadaver/ prosection loss;
- incomplete records;
- fridge/freezer warming or breakdown.

**GQ6 Risk assessments of the establishment's practices and processes are completed regularly, recorded and monitored**

a) There are documented risk assessments for all practices and processes requiring compliance with the HT Act and the HTA's Codes of Practice.

Guidance

All establishments should identify the risks inherent in the key activities, and procedures should be developed in consideration of and to mitigate these potential risks where appropriate. Establishments may tend to focus risk assessments on health and safety issues which, in themselves, are not sufficient to meet our Standards. DIs should also assess the risks associated with licensed activities. Documented risk assessments should include an evaluation of the level of the risk and, where appropriate, the mitigating actions identified and the level of residual risk remaining.

Risk assessments should include the risks relating to the premises, practices and procedures connected with licensed activities, including:

- loss of or damage to specimens;
- loss of traceability;
- receiving specimens without appropriate consent documentation;
- storage of anatomical specimens and contingency arrangements;
- transport of specimens to and from the establishment;
- security arrangements.

b) Risk assessments are reviewed regularly.

Guidance

Risk assessments should be reviewed periodically (typically, every 1-3 years) and the actions to mitigate risks updated as necessary.

Risk assessments should also be reviewed following an incident.

c) Staff can access risk assessments and are made aware of risks during training.

## Guidance

By documenting risk assessments, staff are made aware of identified risks, which helps to prevent risks materialising and informs the development of procedures and relevant documentation.

## Traceability standards

### **T1 A coding and records system facilitates the traceability of bodies and human tissue, ensuring a robust audit trail**

- a) There is an identification system which assigns a unique code to each donation and to each of the products associated with it.
- b) A register of donated material, and the associated products where relevant, is maintained.
- c) An audit trail is maintained, which includes details of when and where the bodies or tissue were acquired, the consent obtained, the uses to which any material was put, when and where the material was transferred, and to whom.
- d) A system is in place to ensure that traceability of relevant material is maintained during transport.
- e) Records of transportation and delivery are kept.
- f) Records of any agreements with courier or transport companies are kept.
- g) Records of any agreements with recipients of relevant material are kept.

#### General guidance

The DI is responsible for the body and body parts of the deceased from the time of donation until the burial, cremation, disposal or return to the family. Full traceability should be ensured during transportation; records of transportation and delivery should be kept. Records should also be kept of any transfer agreements with recipients of relevant material and of any written agreements with couriers or transport providers. There is further guidance on labelling and loan arrangements in the Code of Practice relating to anatomical examination.

A register of donors and specimens should be maintained which should allow all specimens to be identified and traced through to the consent documentation.

Establishments should ensure that traceability is maintained for specimens transported between sites. Records of loan arrangements should be kept and include important details, including: the location where specimens will be stored whilst on loan, dates that specimens have left and arrived at each site, and the condition of specimens. We have produced model loan arrangement templates which are available on our website. A SOP documenting the

process of arrangements for the transport and loan of specimens will help to ensure that the traceability of specimens is maintained.

## **T2 Bodies and human tissue are disposed of in an appropriate manner**

- a) Disposal is carried out in accordance with the HTA's Codes of Practice.
- b) The date, reason for disposal and the method used are documented.

### General guidance

Establishments should carefully document disposal. Supporting procedures should detail the requirements for recording the details of disposal, including the date, reason and method. Records of disposal should be kept in order to provide a complete audit trail from donation through to final disposition.

## **Premises, facilities and equipment standards**

### **PFE1 The premises are secure and fit for purpose**

- a) An assessment of the premises has been carried out to ensure that they are appropriate for the purpose.

### Guidance

The establishment must be clean, well maintained and subject to a programme of planned preventative maintenance. Suitable environmental controls should be in place to avoid potential contamination.

Establishments should periodically review risk assessments of premises, facilities and equipment. This should ideally include an audit of the premises and equipment in order to identify areas requiring rolling maintenance, refurbishment or upgrade. This will help to ensure that remedial actions are implemented in a timely manner so that the premises, facilities and equipment remain fit for purpose.

- b) Arrangements are in place to ensure that the premises are secure and confidentiality is maintained.

Security measures include the use of locks, alarm systems, indelible identification marking and protections against unauthorised access.

Establishments are expected to have policies in place to review and maintain the safety of staff, visitors and other relevant people, such as students or donors.

Since anatomy establishments frequently host teaching sessions, registers of visitors, including all students, should be completed. Many establishments also restrict the number of students present during teaching sessions in the anatomy suite to ensure that anatomical examination can be well supervised and conducted safely and efficiently.

A number of anatomy establishments have implemented particularly good measures to ensure that the safety of visitors and the dignity of the deceased is maintained. Notable examples of this include comprehensive induction packages for students, detailing the requirements of the HT Act and the HTA's Codes of Practice. Some establishments have also introduced a local code of conduct, which students are required to acknowledge before entering the anatomy suite. These measures help to ensure that the dignity of the deceased is always upheld.

c) There are documented cleaning and decontamination procedures.

Guidance

Documented cleaning and decontamination procedures should be supported by schedules.

## **PFE2 There are appropriate facilities for the storage of bodies and human tissue**

a) There is sufficient storage capacity.

b) Storage arrangements ensure the dignity of the deceased.

c) Storage conditions are monitored, recorded and acted on when required.

Guidance

Documented temperature monitoring allows establishments to easily visualise and identify when temperatures are out-of-range. It can also demonstrate temperature trends, to identify when storage conditions may be deteriorating and to alert staff to developing equipment failure. Temperature alarms should be regularly tested and manually challenged periodically to ensure that they are operating as expected.

Signs should be added to freezers to define alarm set points for the temperature ranges so that staff are visually reminded of minimum and maximum temperatures.

Where storage is critical, an appropriate remote temperature monitoring alarm and callout system may be required.

Where material can be stored at ambient/room temperature, this does not mean that storage conditions do not need to be monitored.

d) There are documented contingency plans in place in case of failure in storage area.

Guidance

The establishment must have contingency arrangements in place should there be an emergency situation that renders the premises unusable for the storage of bodies or human tissue; this may need to be through a formalised arrangement with another HTA-licensed establishment for transfer of material.

#### General guidance

Areas used for the storage and use of human tissue must provide an environment that is safe for those working under the licence, preserving the dignity of the deceased and the integrity of the tissue.

Refrigerators, freezers and other vessels which contain human tissue should be appropriately labelled so that staff are aware of the necessity to maintain the quality, safety and security of such material and prevent mix-ups with other tissues.

Human tissue must be stored in such a way that it minimises the risk of contamination to those working under the licence. If necessary, the DI should work with health and safety personnel to implement environmental controls and appropriate equipment to reduce the risk of contamination.

#### **PFE3 Equipment is appropriate for use, maintained, validated and where appropriate monitored**

a) Equipment is subject to recommended calibration, validation, maintenance, monitoring, and records are kept.

#### Guidance

Equipment must be regularly maintained to ensure that it is suitable for use. Equipment should be made of material that is easy to clean, impervious, nonrusting, non-decaying and non-staining.

b) Users have access to instructions for equipment and are aware of how to report an equipment problem.

#### Guidance

There should be a system for renewing items that are no longer suitable through wear and tear.

c) Staff are provided with suitable personal protective equipment.

#### Guidance

Staff must have access to the protective clothing, materials and equipment they need.

## Glossary

<p><b>Adverse event</b></p>	<p>Any event that:</p> <ul style="list-style-type: none"> <li>• Caused harm or had the potential to cause harm to staff or visitors.</li> <li>• Led to, or had the potential to lead to, a breach of security of the premises and the contents contained therein.</li> <li>• Caused harm or had the potential to cause harm to stored human tissue (including loss).</li> <li>• Gave rise to an internal inquiry.</li> </ul> <p>Once an establishment is licensed, any breach of the HT Act or the codes of practice will be considered to be an adverse event.</p>
<p><b>Anatomical examination</b></p>	<p>Examination by dissection for the purpose of teaching, studying or conducting research into the structure of the human body.</p>
<p><b>Anatomical specimen</b></p>	<p>The body of a deceased person, including separated parts of such a body, to be used for the purpose of anatomical examination.</p>
<p><b>Code of practice</b></p>	<p>The HTA codes of practice provide guidance and lay down expected standards for each of the sectors we regulate. There are nine codes available via the <a href="#">HTA website</a>.</p>
<p><b>Designated Individual (DI)</b></p>	<p>The individual designated on the licence to supervise the licensable activities being carried out. DIs are trained by the HTA to carry out this important role and they have statutory responsibilities they must fulfil. Further guidance is provided on the <a href="#">HTA website</a>.</p>
<p><b>Existing holdings</b></p>	<p>The body of a deceased person, or any relevant material which has come from the human body, held immediately prior to 1 September 2006.</p>
<p><b>Former anatomical specimen</b></p>	<p>An organ or body part donated for anatomical examination which is retained once the examination of the rest of the body has been completed.</p>
<p><b>Licence Holder (LH)</b></p>	<p>The person who holds a licence and is responsible for the payment of any fees charged by the HTA. The LH can be a corporate body. Where the applicant is not the proposed DI, the HTA must be satisfied that the applicant is a suitable person to be the holder of the licence.</p>

<p><b>Person designated (PD)</b></p>	<p>A person, or persons, nominated by the DI (in writing to the HTA) who has the ability to 'direct' others in relation to the conduct of activities licensed under the Human Tissue Act 2004. There must be a Person Designated at each satellite site who can direct activities that are licensed there and who is accountable to the DI at the main hub site.</p>
<p><b>Relevant material</b></p>	<p>Defined by the HT Act as material other than gametes, which consists of, or includes, human cells. In the HT Act, references to relevant material from a human body do not include: (a) embryos outside the human body, or (b) hair and nail from the body of a living person. See <a href="#">policy guidance</a> on how to apply this definition on the HTA website.</p>
<p><b>Standard operating procedure (SOP)</b></p>	<p>A document which provides detailed, written instructions to achieve uniformity of the performance of a specific operation, function or task. An SOP must be written with sufficient detail so that someone with limited experience or knowledge of the procedure can successfully reproduce it without supervision.</p>
